Dear Hiring Manager,

Passion drives innovation, and my passion for transforming software quality through intelligent automation has shaped an 18-year career of breakthrough achievements. As a Principal SDET who has mentored 90+ product teams and pioneered AI-driven testing solutions, I'm excited to bring my unique blend of technical expertise and visionary leadership to your organization.

What ignites my enthusiasm is solving complex problems that others consider impossible. When ADP needed to migrate 90+ teams from legacy Protractor to modern frameworks, I didn't just manage the transition—I **engineered a zero-downtime migration that improved test reliability by 90%**. When accessibility compliance seemed overwhelming, I developed automated Playwright + Axe integration that contributed to mobile apps reaching top 5 business rankings. Most recently, I've been architecting ML-powered testing platforms with RAG models that predict failures with 94% accuracy, saving teams 40+ hours weekly.

My technical foundation is robust—JavaScript, TypeScript, Python, Ruby, with deep expertise in Playwright, Cypress, and Selenium. But what truly sets me apart is my ability to see beyond code to the human element. I've successfully **transformed manual testers into automation specialists**, developed comprehensive SDET playbooks adopted by Fortune 500 companies, and created mentorship programs that have elevated entire engineering cultures.

My current pursuit of a Master's in Machine Learning & AI from Heriot-Watt University, combined with IBM certifications in Full Stack and AI Development, reflects my commitment to staying at the forefront of technological evolution. As someone who believes great leaders "stay in the trenches with emerging tech," I don't just adapt to change—I **anticipate and create it.**

I'm particularly drawn to organizations because their commitment to innovation when that aligns perfectly with my philosophy of using technology to create meaningful impact. I see immense potential to apply my experience in AI-driven automation, enterprise transformations, and team development to accelerate quality engineering initiatives.

My Marine Corps background instilled in me the values of precision, accountability, and mission success. These principles, combined with my technical acumen and passion for mentoring, have consistently delivered results that exceed expectations. I don't just build testing frameworks—I **architect solutions that scale, empower teams, and drive business outcomes.**

I would welcome the opportunity to discuss how my proven track record of transforming quality engineering practices, combined with my vision for AI-integrated automation, can contribute to your team's continued success. Thank you for considering my application.

Respectfully,

Oscar Rieken
